Summary

Full-stack engineer with 5+ years specializing in backend systems for data-intensive SaaS. Strong in Python, JavaScript/TypeScript, PHP, SQL, and clean architecture with test-driven development. Experienced across RESTful services, event-driven patterns, and CI/CD. Quick to ramp on new languages and frameworks; applied AI tooling (Claude Code) to accelerate code generation, test scaffolding, and refactors.

Experience

ODAIA

Toronto, ON, Canada

Full Stack Developer

Mar. 2023 – present

- Implemented territory overlays by merging FSAs into polygons and rendering via Google Geolocation APIs, enabling reps to visualize territory-level analytics directly on the map and act faster on localized insights.
- Built an event-driven CSV deployment status dashboard that surfaces end-to-end pipeline stages (data prep, validation, testing, deployment), improving observability and reducing ambiguity for non-technical stakeholders
- Improved site performance by ~30% through async flow refactors and Redis cache pre-warming, cutting page load times and delivering near-instant rendering for high-traffic views.
- Led full-feature delivery from technical documentation and work breakdown through implementation and production release, coordinating cross-functional reviews and test coverage to reduce regressions.

GreenGeeks

Agoura Hills, CA, United States

Full Stack Developer (Contract)

Jan. 2020 – present

- Delivered a PHP-based ticketing platform replacing third-party tools, enabling ticket triage and resolution while eliminating licensing costs.
- Designed and developed a dynamic schedule and time off system for 100+ of the company employees with a user-friendly interface to request and manage their schedules, and for managers to approve or deny requests
- Shipped an internal news system (Markdown, permissions, Slack) to centralize communication.

SPC - Student Price Card

Vaughan, ON, Canada

Full Stack Developer

Oct. 2020 – Mar. 2023

- Owned and developed a Vue.js Chrome browser extension with 2,000+ active users and a 5-star rating; reminded users about available discounts and auto-applied savings at checkout.
- Optimized subscription APIs (Python/Flask), cutting duplicate charges by 90% and stabilizing billing.
- Introduced backend unit testing to prevent regressions and reduce QA churn.

Education

Diploma in Computer Science (GPA 3.9/4) • Seneca College, Toronto, Canada

April 2020

Bachelor in Management of Organizations • Lviv Polytechnic National University, Lviv, Ukraine

May 2018

Technical Skills

Backend Python (FastAPI, Flask) • RESTful APIs • SQL • Snowflake • Event-driven systems • Caching

Frontend TypeScript/Javascript • React • Vue.js • HTML/CSS

DevOps/Testing CI/CD • Unit/Integration Testing • GitHub/Bitbucket

Cloud/Tools AWS • GCP • Git • Jira • Postman • Figma • Claude Code
